OPTIKOS EXPANDS ITS CUSTOM ELECTRO-OPTICAL MANUFACTURING SERVICES

Wakefield, MA. - January 16, 2008 - Optikos Corporation announces the expansion of its optical product development services to include “single-sourcing” of product design, development, and commercialization related to electro-optically based products. This service is targeted to emerging original equipment manufacturers (OEMs) seeking accelerated time-to-market coupled with exceptional quality levels.

Dr. Stephen D. Fantone, President and CEO of Optikos Corp., states *“These specialty-manufacturing services are a natural extension of our technological core competency associated with our product design, optical instruments, and metrology services. We have accommodated our customers’ requests that Optikos further expand our design and development services to include manufacturing, assembly, and distribution support in an effort to provide a complete, sustained sourcing solution for OEMs requiring state-of-art precision electro-optical product capabilities.”*

Dr. Fantone emphasizes that Optikos is uniquely qualified to offer sustained product and process quality assurance throughout the manufacturing and assembly process resulting in reliable and cost-effective distribution of product for our customers.

As a single-source design and manufacturing company, Optikos excels in providing proven capability in all phases of product development and commercialization such as design, material sourcing, manufacturing and testing. Optikos provides services beyond those of traditional contract manufacturers. We offer our clients a collaborative partnership consisting of continuous design and process improvements, value engineering, and an experience base including consumer, industrial, medical and defense products.

About Optikos Corporation

Optikos Corporation, an ISO 9001 certified company, is the world’s leading manufacturer of equipment for the measurement of optical image quality. Optikos is also a leading provider of optical product development services helping development, design, and industrial product firms bring their visions to reality. Products designed by Optikos range from optically based consumer products, to medical instruments and devices, to state-of-the-art optical instruments. The company’s metrology equipment and scientific instrumentation is used in optical laboratories around the globe. Headquartered in Wakefield, MA, Optikos is a privately held engineering consulting and manufacturing firm founded in 1982.
